

CAMPUS CRUISER ASSEMBLY INSTRUCTIONS

Step 1: Take one cart and set on the ground so the wheels are on the ground.

Step 2: Take one sleeve with the smooth edge up and separate the two sides to open into a rectangular shape.

Step 3: Place the sleeve over the cart and slide the sidewalls into the frame so that the bottom edge of the sleeve fits around the grey base pad. Push down to make sure the sleeve is resting on the metal cart.

Step 4: Insert the heavy-duty cable tie through one hole and push back through the second hole on the short side of the cart. Secure the cable tie by inserting the flat end through the slot on the other end. Cut off any excess material.

NOTE: Only heavy-duty 0.76"+ thick cable ties are to be used. Standard zip ties can break easily when the bin is loaded down.

NOTE: Do not lift a full cart up stairs, hand holes are only for lifting over curbs and other small obstacles.

CAMPUS CRUISER ASSEMBLY INSTRUCTIONS (cont.)

To disassemble the bin, simply cut both cable ties and lift the sleeve off of the cart. The sleeves can be laid on the ground, or on the original pallet and stacked up. The carts can be stored any way you like but facing them upside down and alternating them as you stack them will likely be the most efficient use of space. You may want to protect the metal with a piece of foam, paper, etc. to that the carts do not scratch each other.
